

# PEOPLESOFT IN THE CLOUD

## THE MOST IMPORTANT CHARACTERISTICS ARE:

- Developed for the Dutch and the European market.
- Your data will remain within the Netherlands (Safe Harbor guideline).
- Full control over the safeguarding of data (Private Cloud).
- A Service Level Agreement based on your wishes and requirements.
- Cost saving due to dimensions of scale, standardization and specialization.
- Fixed price per month.
- Highest possible availability guaranteed.
- Low risk backed by the combined expertise of Epicenter and MCX, supported by Oracle's Global Support.

*Would you like to reduce your IT costs, with the assurance that the years to come will not present you with any financial surprises? Would you like to concentrate on your core business processes and leave the IT management concerns to someone else? Would it make sense to always have the latest versions of applications available? Then here is an introduction to our offer for PeopleSoft in the Cloud. This is a complete and versatile offer, created by Epicenter and MCX in such a manner that it will (continuously) meet with your specific circumstances, without having the anxiety of set-up and management.*

## THE ADVANTAGES OF WORKING IN THE CLOUD

The option of purchasing PeopleSoft as a service for a fixed monthly charge is an innovative approach. Epicenter and MCX have joined forces to offer a service which delivers a unique combination of quality, performance, continuity and lower costs.

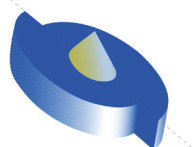

From hardware to database, from web server and application server to the application management; all will be under one roof and optimally integrated.

While PeopleSoft is vital for supporting critical operational processes, many organizations find that keeping up to speed with the correct knowledge and expertise required by PeopleSoft is cumbersome. This is increasingly outsourced to safeguard continuity, where the use of PeopleSoft is purchased as a service.

We will take care of the regular management and upgrading and ensure the application is operational. This frees you up to concentrate on the effective use of the system within your organization. Thanks to our extensive experience with implementations for a wide variety of PeopleSoft clients, linked to our dimensions of scale and standardization, we can achieve cost advantages while still improving quality.

New versions of the application and/or the underlying architecture will automatically be made available to you, ensuring that you are always fully up to date, both functionally and technically.

Even in the Cloud, it still remains your system. The 'Private Cloud Concept' assumes the identical security and integration possibilities enjoyed by the traditional solutions you would normally expect on your own hardware in your own computing suite. The computing centers, as is MCX, are all ISO 27001 certified. In addition, MCX is ISAE 3402 Type II certified, meaning that you are assured of a Cloud solution which meets with the very highest security demands.

Administration Services BV

#### ABOUT EPICENTER AND MCX

Epicenter and MCX are both Oracle Gold Partners and have been for more than 15 years. Benefit from the advantages of our joint knowledge and expertise.

#### ABOUT EPICENTER

Epicenter ([www.epicenter.eu](http://www.epicenter.eu)) has been the home of the true PeopleSoft ERP products specialists since 1997. Epicenter contributed to the most important PeopleSoft implementations in the Netherlands and Belgium (including PeopleSoft Human Resources, Campus Solutions and PeopleSoft Financials). The company's mission is to combine functional expertise with in-depth knowledge of the PeopleTools development environment, while keeping a close eye on the optimal balance between price and productivity/quality. Many clients have outsourced the management of their PeopleSoft system to Epicenter. Among other things this means that even during the start-up phase, all aspects of efficient management and simple upgrades have already been considered.

#### ABOUT MCX

MCX ([www.mcx.nl](http://www.mcx.nl)) was founded in 1999 and has since grown in stature to become the market leader in the Benelux region in the field of hosting and technical management of Oracle applications. For many organizations, the technical management of Oracle applications has become too specialist to maintain 'in-house'. Keeping up to date with the required knowledge can be problematic and finding and retaining the appropriate staff to perform the management is extremely difficult. We offer these organizations all the required knowledge and capacity in one easy package. Our approach offers flexibility, allowing us to provide you with the proper solution; rapidly.

MCX is ISO 9001, ISO 14001, ISO 27001, NEN 7510 and ISAE 3402 Type II certified, which is the guarantee to our clients that all our processes are documented in a high-quality system enabling the company to trace, address and prevent problems as quickly as possible. We believe in minimizing risks by collaboration and in maximizing the return on investment with tools and approaches cut to the specific demands of our clients.

#### MORE INFORMATION

We welcome the opportunity of sharing our knowledge and expertise, even if your organization is still in the orientation phase or if you are just looking for additional information about PeopleSoft, Epicenter or MCX.
